Wired Controller

AUX

AIR CONDITIONER

Wired Controller

XK-05A

Built-In Remote Signal Receiver

A signal receiver is built–in the remote controller. Signal from remote controller can be received by wired controller, so the system status could be adjusted using a remote controller.

Addresses Setting

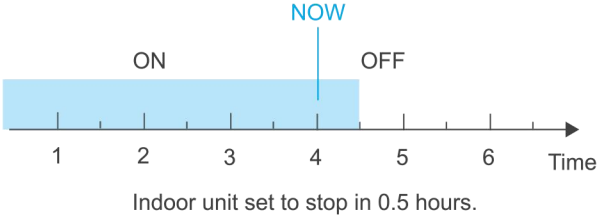
The address setting function is coupled with easy installation and simple future maintenance. Service personnel can set the address for the indoor unit using XK–05A.

Follow Me

With the follow me function, the indoor unit responds to the temperature measured by the temperature sensor built–in the wired controller, instead of the temperature sensor in the indoor unit itself, so the temperature is measured closer to the user, rather than at the ceiling or floor height.

Built-in Timer

The built–in daily timer allows the systems automatically start and stop according to user–defined time setting.



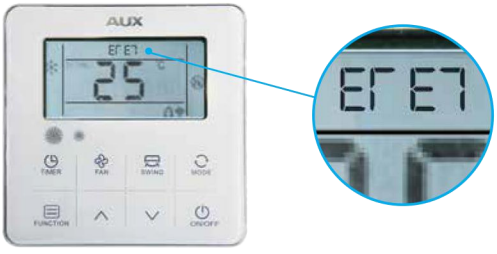
Indoor unit set to stop in 0.5 hours.

Wired Controller

XK-05A

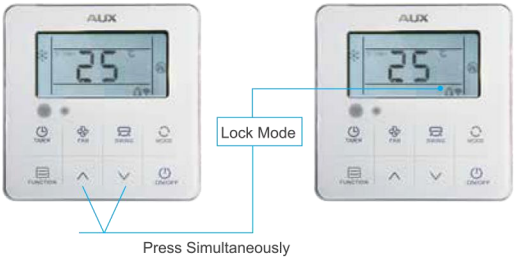
User-Friendly & Elegant Design

The XK–05A is a hidden–mode controller specially designed for hotels, hospitals, schools, offices. Fitted with a background light as standard, easy to use in the dark.



Error Reporting

If there is a malfunction, error codes are displayed in the temperature setting area of the controller's display screen.



Keyboard Locking

The locking function could prevent other people changing the setting.
